To Whom It May Concern,

My name is Irvanjit Singh Gill and I am a recent graduate from the University of Waterloo's Faculty of Engineering.

I graduated with a Honours, Bachelor of Applied Science, Computer Engineering in June 2018 of last year. Through-out the course of my degree, I have had the fortunate of interning at several different companies across North America, ranging from small startups to established Fortune 500 corporations, the most recent of whom has been Tesla Inc. and Apple Inc. My internships have provided me with invaluable experience, insight and an opportunity to grow as a developer. I was also able to leave school with almost 3 years of industry experience.

After graduating, I have spent the last several months working with a non-profit charitable organization in Canada whose work I am very passionate about. The organization, called Gursevak, maintains a set of native mobile applications, and I have been working on a voluntary basis as a lead developer and product manager to maintain, update and redesign the applications, both technically, and from a design and marketing perspective.

I have also consciously taken the opportunity over the last few months to take a much-needed break from industry, and now feel I am ready to begin full-time work.

Boston Dynamics has always piqued my interest because of the groundbreaking work in an area that is positioned to be at the forefront of the automation revolution. However, my desire to join this team is motivated by the potential that I see for personal growth through working on real-world problems that have the potential to literally shape the future over the next several years. The idea of being surrounded by incredibly bright individuals that are bringing their knowledge and experience from all sorts of domains excites me.

I believe that my time spent at the University of Waterloo (sometimes referred to informally as Canada's MIT), and specifically, the Electrical and Computer Engineering department (one of the most rigorous and intensive programs that the university offers, has prepared me for a career working on teams that are facing challenging and ambitious new projects. I would love for the opportunity to further discuss the possibility of starting my career with Boston Dynamics.

Thank-you for your time,

-Irvanjit Singh Gill
